

A Legacy of High Performance

A world leader in test and measurement systems since 1984, Data Physics provides high performance dynamic signal processing solutions to key industries including:

- Aerospace
- Manufacturing
- Military
- Power and Process
- Automotive

With a diverse and impressive customer list from Apple to Zeiss, Data Physics continues to push the envelope with technological advances for the vibration testing community.

Dynamic Signal Analyzers & Vibration Controllers

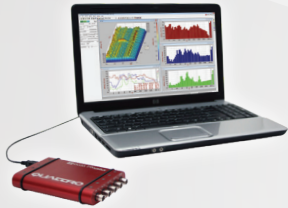

A member of the **N|V|T** GROUP

Dynamic Signal Analyzers

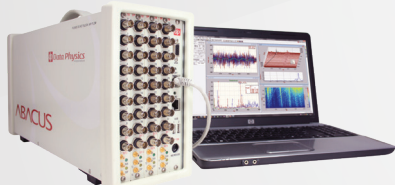

Accurate, easy-to-use analyzer solutions for optimum testing performance.

Applications include:

- Modal Analysis
- Acoustics
- Structural Analysis
- General Vibration Analysis
- Rotating Machinery

200 SERIES

700 SERIES

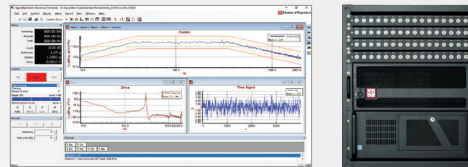

Vibration Controllers

Data Physics sets the standard for vibration control – for both single and multi-shaker applications.

- Random
- Sine
- Resonance Search & Dwell
- Classical Shock & Transient Control
- SRS Synthesis
- Mixed Mode
- Time Data Replication

700 SERIES

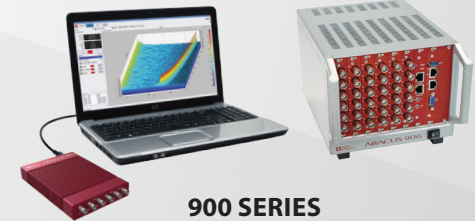

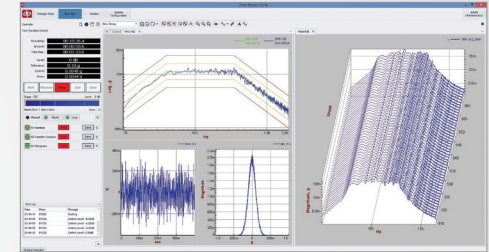

800 SERIES

Integrated Signal Analysis and Control

Comprehensive signal analysis, intelligent vibration control, and all-in-one solutions.

- Advanced, scalable hardware
- Multiple simultaneous measurements
- Real-time math channels
- Remote and autonomous operation

900 SERIES

Training

Our trainers are experts in practical application, product knowledge and operation. They'll help you get the most from your Data Physics analyzers and controllers.

Technical Support

Need technical assistance? Our Technical Support team can get you up and running quickly. Get peace of mind knowing that your equipment is properly maintained, calibrated, and loaded with the latest software and firmware upgrades.
